

# Asar Zuluev

647-877-4897 | [asar@asarmichil.com](mailto:asar@asarmichil.com) | [asarmichil.com](https://asarmichil.com) | [github.com/asarmichil](https://github.com/asarmichil) | Vancouver, BC

## Education

**University of British Columbia** – B.Sc. in Computer Science

Expected Dec 2026

## Experience

**Software Engineering Intern, SAP** – Vancouver, BC

September 2025 – Current

- Resolved JavaScript rendering bugs across mobile and web chart components, eliminating visual inconsistencies in production environments used by enterprise customers
- Automated Jira test status synchronization in CI/CD pipeline, providing real-time coverage visibility and eliminating manual updates for QA and engineering teams
- Conducted systematic QA testing with detailed reproduction steps, accelerating developer debugging cycles and improving release quality

**Co-op Software Developer, Golf918** – Remote

June 2024 – January 2025

- Architected complete multi-tenant B2B SaaS platform from concept to production using React, Node.js, Redis, RabbitMQ, and PostgreSQL, developing 10 interconnected microservices that drove company to \$400K revenue with 50+ customers in first year
- Developed sophisticated booking engine processing 4,500+ reservations with configurable timezone handling, dynamic pricing rules across venue/simulator/membership tiers, and embeddable widgets that integrate seamlessly into client websites
- Created internal admin panel enabling sales team to independently onboard new clients, eliminating engineering bottlenecks and reducing setup time from multi-day ticket queues to same-day deployment

**Software Developer Intern, LandPass** – Toronto, ON

June 2023 – October 2023

- Developed full-stack hunting land marketplace with AngularJS, PostgreSQL, and GraphQL, integrating land parcel APIs and real-time weather services with custom geographic boundary mapping and Azure AI document verification

## Projects

### You Exist

[michils.com](https://michils.com)

- Developed full-stack social platform with SvelteKit, Supabase, and AWS S3/CloudFront, implementing user authentication, social engagement features, and transactional email systems
- Designed mobile-first responsive UI with multi-step onboarding and dark/light theming, implementing custom authentication flows and profile management

### Auto Jockey

- Created DJ automation platform with Python, FastAPI, and React that analyzes Spotify playlists and generates audio transitions using librosa for spectral analysis
- Implemented asynchronous processing pipeline with Celery workers to handle concurrent playlist analyses, supporting crossfade, smooth blend, and quick-cut transition styles

### Distributed Systems & Graphics (UBC Coursework)

- Implemented Raft consensus algorithm in Go for distributed key-value store with leader election, log replication, and fault tolerance
- Developed ray marching renderer with custom GLSL shaders for real-time 3D signed distance field visualization

## Skills

Languages: JavaScript/TypeScript, Python, Java, C++, Go, C, SQL

Frameworks: React, Next.js, SvelteKit, Angular, Node.js, Express.js

Databases: PostgreSQL, DynamoDB, Redis, MySQL

Tools: GraphQL, REST, AWS, Docker, RabbitMQ
